

KRANITAN K 2000

Product Information

CHARACTERISTICS

Appearance	: white – hazelnut coloured powder
pH	: 9,5 – 10,5
Storage	: in a dry and well-ventilated area, away from humidity

PROPERTIES

KRANITAN K 2000 is a particularly versatile modern basifier; its particular chemical composition renders it suitable for use undissolved in a short or long bath at medium to high temperatures.

KRANITAN K 2000 has a bland basifying action which yields particularly full leather using relatively low chrome concentrations; in addition, chrome exhaustion amply meets the requirements of today's tanneries.

The above information results from our technical experience: it is provided as an indication, and is not to be considered as a guarantee.
